

Pickup Service

Legal and Copyright Notices

Payment

You must remit payment in accordance with the *FedEx Service Guide*, tariff, service agreement or other terms or instructions provided to you by FedEx from time to time. You may not withhold payment on any shipments because of equipment failure or for the failure of FedEx to repair or replace any equipment.

Inaccurate Invoices

If you generate an inaccurate invoice, FedEx® may bill or refund to you the difference according to the *FedEx Service Guide*, tariff service agreement or other terms or instructions provided to you by FedEx from time to time. A request for refund on a FedEx shipment must be made in accordance with the applicable Service Guide or terms or instructions provided by FedEx from time to time. A shipment given to FedEx with incorrect information is not eligible for refund under any FedEx money-back guarantee. FedEx may suspend any applicable money-back guarantee in the event of equipment failure or if it becomes inoperative.

Confidential and Proprietary

The information contained in this guide is confidential and proprietary to FedEx Corporate Services, Inc. and its affiliates (collectively "FedEx"). No part of this guide may be distributed or disclosed in any form to any third party without written permission of FedEx. This guide is provided to you and its use is subject to the terms and conditions of the FedEx Automation Agreement. The information in this document may be changed at any time without notice. Any conflict between this guide, the FedEx Automation Agreement and the *FedEx Service Guide* shall be governed by the FedEx Automation Agreement and the *FedEx Service Guide*, in that order.

About This Guide

This guide describes how to integrate with FedEx Web Services.

It is written for the application developer who uses web services to design and deploy applications enabled by FedEx. It describes how to get started with application development and how to use the Application Programming Interface (API). It also describes each available service in addition to the business logic that drives each FedEx process.

Document Organization

Each web service provides access to FedEx features. The service description includes service details and a full schema listing to facilitate application development.

Resources

- FedEx Services At-a-Glance: fedex.com/us/services
- *FedEx Service Guide* available at fedex.com/us/service-guide
- Microsoft Web Services: msdn.microsoft.com/en-us/library/ms950421.aspx
- O'Reilly XML.com: www.xml.com
- Secure Socket Layer Certificates: fedex.com/us/developer/downloads/dev_cert.zip
- Web Services organization home page: www.web-services.org

Support

- Contact FedEx Web Services technical support at websupport@fedex.com.
- For technical support, call 1.877.339.2774 and state "API" at the voice prompt.
Support hours are Monday through Friday, 7:00 a.m. to 9:00 p.m. CST, and Saturday, 9:00 a.m. to 3:00 p.m. CST.
- For FedEx Customer Service, call **1.800.GoFedEx 1.800.463.3339**.
Customers using a FedEx® Compatible Solutions Program automation solution should contact their software provider for support.

1 Introduction

FedEx Web Services gives you the tools to build custom platform- and interface-independent applications that access FedEx features. You can use FedEx Web Services in a variety of ways to create customized integration solutions for your specific shipping needs. Here are just a few of the ways a company can use web services to streamline operations, improve visibility, and provide more choices to clients:

- **Give Customers More Options:** Help customers learn about all the available shipping options and rates with Ship Service WSDL, OpenShip WSDL, and Rate Services WSDL. You can also extend this service to your shopping cart and website, allowing customers to access money-saving information firsthand.
- **More Convenience:** Use the Locations Service WSDL to find the FedEx pickup location nearest your customer. Or, send an email to your customers with a link to this service as part of your standard order-receipt process.
- **Offer Global Shipping Options:** Create shipping labels for worldwide locations. Improve customer service by offering more shipping options to customers in more countries with the consolidated Ship Service WSDL.
- **Reduce Customer Service Costs:** Decrease phone traffic from customers checking the status of their shipments and cut customer service costs. FedEx provides online Tracking and Visibility Services that allow you to provide customers with the status of shipments, Signature Proof of Delivery (SPOD), and Shipment Notification in the Ship Request.
- **Simplify Processes and Improve Satisfaction:** In addition to ExpressTagAvailability, provide a simple way to allow customers to return an order with Email Labels. This service sends an email with the address (URL) of a website where the recipient can log in and print a return label.

Why should developers be interested in web services?

- **Interoperability:** Any web service can interact with any other web service and can be written in any programming language.
- **Ubiquity:** Web services communicate using HTTP and XML. Any connected device that supports these technologies can both host and access web services.
- **Low Barrier to Entry:** The concepts behind web services are easy to understand, and developers can quickly create and deploy them using many toolkits available on the web.
- **Industry Support:** Major content providers and vendors support the web services movement.

Any application running on any platform can interact with a web service by using the Simple Object Access Protocol (SOAP) and Web Services Description Language (WSDL) standards for message transfer and service discovery. By following the standards, applications can seamlessly communicate with platform services.

1.1 Document Overview

This guide provides instructions for coding the functions you need to develop FedEx supported applications. The following chapters make up this guide:

- Introduction (this chapter):
 - Documentation overview and guidelines, including how to use the Help application and how to print this guide.
 - Overview information about web services, including a high-level description of FedEx Web Services methods.
 - Coding basics.
 - Overview information about testing and certifying your application.

Each chapter covering FedEx Web Services coding includes:

- Service Details: Business rules for using the FedEx service.
- Service Options: Links to additional services that can be added to the basic web service.
- Coding Details: Best practices information, basic request and reply elements, and a link to error messages.
- XML Schema: A link to the layout for the service. This layout provides coding requirements for all elements in the schema.

1.2 Printing All or Part of This Guide

You can print all or part of this guide from the PDF version.

1.2.1 Printing from the PDF Version

From the PDF version you can print the complete document or a page range of the document.

- 1) Open the PDF file and click the printer icon  or click **File > Print**.
- 2) From the **Print** dialog box, print the complete document, specify a page range, or choose from any of the available print options.

1.3 Web Services, WSDL, and SOAP Overview

This section describes the standard coding technologies used in FedEx Web Services.

1.3.1 Web Services

Web services are a collection of programming technologies, including XML, Web Services Description Language (WSDL), and SOAP, which allow you to build programming solutions for specific messaging and application integration.

Web services are, by definition, platform independent. FedEx Web Services allow developers to build custom applications that are independent of changes to the FedEx interface.

Web Services are consumed by many different applications across many platforms. It is based on the basic principles that govern XML standards, one of which is how Namespaces can be declared and applied.

Namespaces are declared as an attribute of an element. It is not mandatory to declare namespaces only at the root element; rather it could be declared at any element in the XML document. The scope of a declared namespace begins at the element where it is declared and applies to the entire content of that element, unless overridden by another namespace declaration with the same prefix name, the content of an element is the content between the <opening-tag> and </closing-tag> of that element. So essentially, XML namespace declarations are scoped, meaning that the declared prefix (or default namespace) is in force for the element on which the declaration occurs (as well as its descendant elements). A namespace declared as follows:

```
<v12:RateReply xmlns:v12="http://
```

is semantically same as

```
<RateReply xmlns="http://fedex.com/ws/rate/v12">
```

or even (hypothetically) same as

```
<foo:RateReply xmlns:foo="http://fedex.com/ws/rate/v12">
```

1.3.2 WSDL

A SOAP request to, or response from, a service is generated according to the service's WSDL definition. A WSDL document describes a service. It is an XML document that provides information about what the service does, the methods that are available, their parameters, and parameter types. It describes how to communicate with the service in order to generate a request to, or decipher a response from, the service.

The purpose of a WSDL is to completely describe a web service to a client. A WSDL defines where the service is available and what communications protocol is used to talk to the service. It defines everything required to write a program to work with an XML web service. A WSDL document describes a web service using seven major elements. Elements can be abstract or concrete.

Abstract XML elements describe the web service: <types>, <message>, <operation>, <portType>. Concrete XML elements provide connection details: <service>, <port>, <binding>.

1.3.2.1 WSDL Elements

Element	Definition
<definitions>	The root element contains name space definitions.
<portType>	The most important WSDL element. It is a set of all operations that a web service programming language.
<types>	Defines variable types used in the web service (both the parameters passed to a function and the type of the value passed back via the response). The data types are described by XML schema. This element contains user-defined data types (in the form of XML schema). For maximum platform neutrality, WSDL uses XML schema syntax to define data types.
<message>	Defines the data elements of an operation. Each message can consist of one or more parts that can accept and is a container for <operation> elements. This WSDL element describes a web service, the operations that can be performed, and the messages that are involved, and can be compared to a function library (or a module or a class) in a traditional can be compared to the parameters of a function call in a traditional programming language.
<operation>	Child of the <binding> element that defines each operation that the port exposes. This element allows only three messages: Message - Definition Input Message - Data web services receive Output Message - Data web services send Fault Message - Error messages from web services
<service>	Contains a <port> child element that describes the URL where the service is located. This is the location of the ultimate web service.
<binding>	Defines the message format and protocol details for each port. The binding element has two attributes: the name attribute and the type attribute. This element specifies how the client and the web service should send messages to one another.

Note: For more information about the WSDL standard, refer to the World Wide Web Consortium (W3C) Website at w3.org/TR/wsdl.

1.3.3 SOAP

- Is a simple XML-based protocol that allows applications to exchange information over HTTP.
- Is built on open standards supported by numerous development tools on various platforms.
- Is a request interface object in your application programming language.
- Provides a way to communicate between applications running on different operating systems, with different technologies and programming languages.
- Enables the data to pass through layers of intermediaries and arrive at the ultimate receiver the way it was intended.

Note: You may not need to actually construct the SOAP messages yourself — many development tools available today construct SOAP behind the scenes.

1.3.3.1 SOAP Message

A SOAP message is an XML document that can be a request for a web service from a client or a “reply” from a web service to a client.

- Required <SOAP:Envelope>
- Optional <SOAP:Header>
- Required <SOAP:Body>

1.3.3.1.1 Example: Delete Tag Request (SOAP Message)

```
<SOAP-ENV:Envelope
  xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"
  xmlns:SOAP-ENC="http://schemas.xmlsoap.org/soap/encoding/"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns="http://fedex.com/ws/ship/v15">
  <SOAP-ENV:Body>
    <DeleteTagRequest>
      <WebAuthenticationDetail>
        <UserCredential>
          <Key>
            User Key
          </Key>
          <Password>
            User Password
          </Password>
        </UserCredential>
      </WebAuthenticationDetail>
      <Client detail>
        <AccountNumber>xxxxxxxx</Account number>
        <MeterNumber>xxxxxxx</MeterNumber>
      </ClientDetail>

      <Version>
        <ServiceId>ship</ServiceId>
        <Major>15</Major>
        <Intermediate>0</Intermediate>
        <Minor>0</Minor>
      </Version>
      <DispatchLocationId>MQYA</DispatchLocationId>
      <DispatchDate>yyyy-mm-dd</DispatchDate>
      <Payment>
        <PaymentType>shipper</PaymentType>
        <Payor>
          <AccountNumber>xxxxxxxx</AccountNumber>
          <CountryCode>US</CountryCode>
        </Payor>
      </Payment>
      <ConfirmationNumber>997037200019454</ConfirmationNumber>
```

```
</DeleteTagRequest>
</SOAP-ENV:Body>
</SOAP-ENV:Envelope>
```

1.3.4 Non-SOAP Web Services

FedEx offers a non-SOAP web services solution that you can use to send transactions without having to use tools that provide SOAP protocol support for web services. This may be convenient for developers using environments that do not provide support for SOAP. With this interface, XML documents are sent directly to the FedEx servers via the HTTP POST command. FedEx provides a set of specifications and examples to help with the development of this type of communications method.

To use the non-SOAP web service solution, you must have a working knowledge of HTTPS and Secure Socket Layering (SSL) encryption, the ability to provide a secure SSL connection to FedEx and the ability to code to an operation interface using XML.

The interfaces used in the SOAP and non-SOAP web services are defined in WSDL files. The WSDL files contain schemas that define the layout of the operations. The same WSDL file is used for both the SOAP and non-SOAP web service users.

Non-SOAP users are concerned only with the schema definitions and not the other WSDL components that are SOAP-specific. The XML data that is sent via the non-SOAP interface looks almost identical to the data that is sent via the SOAP interface. The only difference is that the data sent via the non-SOAP interface does not contain the wrapping Envelope and Body tags that are specific to SOAP. The following is an example of a TrackRequest using the non-SOAP interface.

1.3.4.1 Example Track Request

```
<q0:TrackRequest>
  <q0:WebAuthenticationDetail>
    <q0:UserCredential>
      <q0:Key>xxxxxxxxxxxxxxxx</q0:Key>
      <q0:Password/>
    </q0:UserCredential>
  </q0:WebAuthenticationDetail>
  <q0:ClientDetail>
    <q0:AccountNumber>xxxxxxxx</q0:AccountNumber>
    <q0:MeterNumber>xxxxxxxx</q0:MeterNumber>
    <q0:IntegratorId/>
    <q0:Localization>
      <q0:LanguageCode>EN</q0:LanguageCode>
      <q0:LocaleCode>us</q0:LocaleCode>
    </q0:Localization>
  </q0:ClientDetail>
  <q0:TransactionDetail>

  <q0:CustomerTransactionId>Basic_TrackRequest_q0_Internal</q0:CustomerTransactionId>
    <q0:Localization>
      <q0:LanguageCode>EN</q0:LanguageCode>
      <q0:LocaleCode>us</q0:LocaleCode>
    </q0:Localization>
```

```

</q0:TransactionDetail>
<q0:Version>
  <q0:ServiceId>trck</q0:ServiceId>
  <q0:Major>9</q0:Major>
  <q0:Intermediate>0</q0:Intermediate>
  <q0:Minor>0</q0:Minor>
</q0:Version>
<q0:SelectionDetails>
  <q0:CarrierCode>FDXE</q0:CarrierCode>
  <q0:PackageIdentifier>
    <q0:Type>TRACKING_NUMBER_OR_DOORTAG</q0:Type>
    <q0:Value>797843158299</q0:Value>
  </q0:PackageIdentifier>
</q0:SelectionDetails>
<q0:ProcessingOptions>INCLUDE_DETAILED_SCANS</q0:ProcessingOptions>
</q0:TrackRequest>

```

1.3.4.2 Error Handling

Error handling for non-SOAP operations is different from error handling for SOAP operations. The SOAP specification provides an error handling mechanism that is not present for non-SOAP operations. For a SOAP operation, a fault is returned as a SOAP exception. For a non-SOAP request, the contents of the SOAP fault are returned as an XML document. These SOAP fault documents are returned in situations such as schema validation failures or when operation types are unrecognized. In the following example, a SOAP fault document is returned from a schema validation failure in which the AccountNumber element was incorrectly sent as the AccountNumberx element:

```

<soapenv:Fault xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/">
  <faultcode>soapenv:Server</faultcode>
  <faultstring>5: Schema validation failed for request.</faultstring>
  <detail>
    <con:fault xmlns:con="http://www.bea.com/wli/sb/context">
      <con:errorCode>5</con:errorCode>
      <con:reason>Schema validation failed for request.</con:reason>
      <con:details>
        <con1:ValidationFailureDetail
          xmlns:con1="http://www.bea.com/wli/sb/stages/transform/config">
          <con1:message>Expected element 'AccountNumber@http://fedex.com/ws/ship/v8' instead of
            'AccountNumberx@http://fedex.com/ws/ship/v8' here in element
            ClientDetail@http://fedex.com/ws/ship/v8</con1:message>
          <con1:xmlLocation>
            <ship:AccountNumberx
              xmlns:ship="http://fedex.com/ws/ship/v8">000000000</ship:AccountNumberx>
            </con1:xmlLocation>
            <con1:message>Expected element 'AccountNumber@http://fedex.com/ws/ship/v1' before the
              end of the content in element
              ClientDetail@http://fedex.com/ws/ship/v8</con1:message>
            <con1:xmlLocation>
              <ship:ClientDetail xmlns:ship="http://fedex.com/ws/ship/8">
                <ship:AccountNumberx>00000000000000000000</ship:AccountNumberx>
                <ship:MeterNumber>0000000</ship:MeterNumber>
              </ship:ClientDetail>
            </con1:xmlLocation>
          </con1:ValidationFailureDetail>
        </con:details>
      </con:fault>
    </detail>
  </soapenv:Fault>

```

```
<con:location>
<con:node>Validate</con:node>
<con:pipeline>Validate_request</con:pipeline>
<con:stage>ValidateRequest</con:stage>
<con:path>request-pipeline</con:path>
</con:location>
</con:fault>
</detail>
</soapenv:Fault>
```

Each reply should be checked for the Fault element to indicate failure in processing the message.

Note: *Normal error processing still applies; this is an additional error check for incorrect syntax in XML documents*

Keep in mind that if you use either the SOAP or non-SOAP version of FedEx Web Services, labels are returned as Base64 encoded. To print shipping labels, you must decode labels before sending them to your printer.

1.3.4.3 Non-SOAP HTTP POST Example

The following HTTPS POST example is a valid working example, but is not guaranteed to work for all programming languages, applications, and host systems:

```
POST /xml HTTP/1.0
Referrer: YourCompanyNameGoesHere
Host: ws.fedex.com
Port: 443
Accept: image/gif, image/jpeg, image/pjpeg, text/plain, text/html, */*
Content-Type: text/xml
Content-length: %d
Your FedEx Transaction
```

Each line is followed by one new line character except Content-length and the FedEx transaction. Two new line characters follow the Content-length line. The FedEx transaction has no extra characters. The Content-length line should have the length of the FedEx transaction in place of the %d variable.

Note: *Port 443 must be opened for bi-directional communication on your firewall. After formatting your non-SOAP transaction and placing it in a HTTP POST request, you will need to open an SSL connection to the FedEx test server and send the request through FedEx by using your SSL connection.*

Next, parse the HTTPS response to determine if there were any errors. Examine the HTTP header to determine if any HTTP or Web Server errors were encountered. If you received a 200 status code, parse the reply to determine if there were any processing problems.

1.3.5 Visual Basic Project Error

You may receive an error indicating that an element is not set, even after setting it in the code. When you set a Boolean type element to true, you may also need to set the specified element to true.

1.4 Implementing FedEx Web Services

Before you begin implementing FedEx Web Services, note the following guidelines:

- FedEx Web Services are designed for use by skilled developers who are familiar with the communication standards SOAP and Web Services Description Language (WSDL).
- Unlike traditional client/server models, such as a web server or web page system, web services do not provide the user with a graphical user interface (GUI). Instead, web services share business logic, data, and processes through a programmatic interface across a network.
- To perform a particular FedEx task such as tracking a package, you need to use a class, module, or function that creates your request, sends it to the FedEx platform, and handles the response.
- FedEx Web Services are designed to support any operating system and coding language. Downloadable sample code is available in Java, C#, VB, .Net and PHP languages from the FedEx Developer Resource Center Technical Resources.
- Transactions submitted to FedEx using FedEx Web Services are required to have a minimum of 128-bit encryption to complete the request.

1.5 Understanding the XML Schema

The XML schema defines the messages that you can use to access the FedEx services. You create a request that contains business data and other instructions and you send it to FedEx. FedEx replies with a response that contains the data resulting from the instructions you sent in.

Note: The schema diagrams are conveniently linked to help you find information and child values.

The XML schema provides a means for defining the structure, content, and semantics of XML documents.

An XML schema defines:

- Elements and attributes that can appear in a document
- Elements that are child elements
- Order and number of child elements
- Whether an element is empty or can include text
- Data types, default values, and fixed values for elements and attributes

Some important facts about the XML schema:

- Elements that contain sub-elements or carry attributes have complex types.
- Elements that contain numbers (and strings, and dates, etc.), but do not contain any sub-elements, have simple types. Some elements have attributes. Attributes always have simple types.
- Complex types in the instance document, and some of the simple types, are defined in the schema associated with a FedEx Web Service. Other simple types are defined as part of XML schema's repertoire of built-in simple types.
- XML schema built-in simple types are prefixed by "xs:", which is associated with the XML schema namespace through the declaration `xmlns:xs="http://www.w3.org/2001/XMLSchema"`, displayed in the schema element.
- The same prefix, and the same association, are also part of the names of built-in simple types, such as `xs:string`. This association identifies the elements and simple types as belonging to the vocabulary of the XML schema language, rather than the vocabulary of the schema author.

1.5.1 Guide to the XML Schema

The XML schema for each WSDL provides details about the structure, content, and semantics of the request XML document sent to a FedEx Web Service and the XML document returned by that FedEx Web Service.

The top of each service schema includes:

- Schema location and schema file name that ends in an ".xsd" suffix.
- Alphabetical listing of complex types for the documented service.
- Alphabetical listing of schema simple types for the documented service.
- Input or request data type for the documented service.
- Output or reply data type for the documented service.

The remainder of the service schema contains tables of information about each element, complex type, and simple type.

Each table consists of some or all of the following sections: diagram, namespace, children, type, properties, used by, facets, and source.

1.6 Implementation Process

Planning your integration and organizing your application data to address your shipping needs can sometimes take more time than the actual implementation of the integration. FedEx Web Services conform to industry standards and are compatible with a comprehensive array of developers'

tools. This ensures the fastest time-to-market with maximum flexibility to integrate FedEx transactions and information into your applications. FedEx WSDLs are fully interoperable with any product or developer's tool that also conforms to the WS-I Basic Profile. For details, see [WS-I.org/Profiles/BasicProfile-1.1-2004-08-24](http://www.fedex.com/Profiles/BasicProfile-1.1-2004-08-24).

To obtain FedEx Web Services and begin integrating with an application, you need to access documentation, sample code, and sample service requests and replies with the WSDLs from the FedEx Developer Resource Center Technical Resources. Also, obtain a test meter number to engage in real-time online testing in the FedEx hosted test environment.

Note: Not all services are available outside the U.S.

1.6.1 Testing

FedEx supplies a complete online operating environment with which to test your applications against live FedEx servers. To execute test interactions, you must first include a test account number, test meter number, authentication key, and password in your code. These credentials are provided to registered developers at the FedEx Developer Resource Center at www.fedex.com/developer.

Production credentials can be obtained prior to the certification process. Advanced services are not enabled, but standard services are enabled. Refer to [Preproduction Assistance](#) for more information on support from FedEx.

1.6.1.1 Preproduction Assistance

Preproduction assistance is available via the FedEx Web Integrated Solutions Consultation (WISC) team. If you are in the preproduction stages of implementing a FedEx web integrated solution and would like to speak with a FedEx integration consultant who can assist you in understanding FedEx Web Services, contact your FedEx sales executive or technical support at 1.877.339.2774 Monday thru Friday, 7 a.m. to 9 p.m. and Saturday 9 a.m. to 3 p.m. (CST). Both your FedEx sales executive and technical support can request a WISC team member to contact you within 3 business days.

Corporate developers may find that solutions to their needs have already been implemented by a software vendor that is FedEx® Compatible. If improved time-to-market, cost containment, or specialized knowledge is needed, corporate development planners may want to review the available third-party solutions. To see a list of the solutions provided by the FedEx® Compatible providers, go to the Available FedEx® Compatible Solutions page at <http://www.fedex.com/us/compatible/>.

1.6.2 Certification

Certification is the process of ensuring that your implementation meets a number of requirements for safe, secure, and effective operation of your solution in the FedEx production environment. Certification requirements differ based on whether you are a corporate or commercial developer, and whether you are

implementing using the advanced or standard services. The FedEx Web Integrated Solutions Consultation (WISC) team member assigned to support you will assist you with the certification process.

Note: Certification is not required for rating and tracking in production.

1.6.3 Go To Production

Once an application has passed certification, the developer must replace the test credentials with the production credentials issued by FedEx. The application connection is then directed to the production servers, and the application is live.

1.6.3.1 Requirements for Corporate and Non-Commercial Developers

There are some differences in how support is provided and in the approvals required to go into production that depend on whether you are creating an application for use by your own company or if you are planning to resell your solution to others.

1.6.3.2 Requirements and Resources for Corporate Developers

Corporate developers are typically part of a dedicated development team at a single company. This category also includes third-party developers (consultants) hired by the company to work on its behalf. In all cases, the integration will be used by the company itself and will not be resold or distributed outside of its own footprint. In this situation, FedEx can support the customer directly.

Requirements and Resources for Corporate Developers	
Must be accepted into the FedEx® Compatible Program	No
Self-certification of implementations using standard services	Yes
Self-certification of implementations using advanced services	No
Certification assistance	Yes (WISC team)
FedEx supports the customer directly	Yes

1.6.3.2.1 Requirements for Consultants

Consultants developing on behalf of a corporate customer must ensure that their client provides their account information and a signed End User License Agreement (EULA) to FedEx to obtain a production test meter.

1.6.3.2.2 Requirements and Resources for Commercial Developers

Commercial developers create solutions with the intent of distributing and/or reselling them to their customers. Because they are deployed in a variety of situations, commercial integrations generally

require a higher order of “fit and finish.” Commercial developers are responsible for supporting their products for their customers. FedEx has a dedicated team of professionals to help developers commercialize their products and to coordinate the three-way interplay between the developer, the end customer, and FedEx.

If you are a commercial developer interested in becoming a FedEx Compatible provider, go to <http://www.fedex.com/us/compatible/> for more information about the FedEx Compatible Program.

1.6.3.3 URL Errors

If a VB.NET or C# project still sends transactions to the test server after changing the URL in the WSDLs to point to production, perform the following:

- Make sure permissions are already activated in the production environment.
- Copy the WSDL files to a different folder.
- Follow the directions on changing the new WSDL files to point to production, as described in the FedEx Developer Resource Center in the “Move to Production” topic.
- Remove existing web services references from your project that point to old WSDLs containing the URLs to the test environment.
- Create new web references that point to the modified WSDLs. Use the same names as the old references.
- Compile and test the project. Your new production credentials should work for standard web services, such as rating or tracking without extra permissions. Advanced web services require permissions to be active before they will work. Test keys will no longer work with production server addresses

2 Pickup Service

The FedEx pickup web service allows you to schedule a courier to pick up a shipment, cancel a pickup request, or check for pickup availability.

2.1 Pickup

Use the Pickup Service to schedule courier pickup of a shipment at the location specified in the transaction.

2.1.1 Pickup Service Details

FedEx Express[®] pickup requests:

- The time that your packages will be ready to be picked up must be no later than the postal code cutoff time for your location. The cutoff time can be retrieved with the PickupAvailability request.
- The length of time from when your packages will be ready to the time at which the courier will no longer be able to enter the premises to pick up the packages must be no less than the "access time", which can also be retrieved with the PickupAvailability request.
- FedEx Express pickup can be scheduled for the current or next business day.
- The maximum number of packages for a single pickup request is 99.
- If you already have a regular scheduled pickup, it is not necessary to schedule a one-time pickup or add another regular scheduled pickup.
- You cannot change a pickup request. To change a request, you must delete the original request and enter a new request.
- FedEx system now supports domestic UK Pickup functionality for intra UK.

For more information about your cut-off time, call FedEx Customer Service at **1.800.GoFedEx 1.800.463.3339**.

FedEx Ground[®] pickup requests:

- Pickup can be scheduled for the next business day or any business day up to 2 weeks in advance.
- Maximum number of packages for a single pickup request is 99.
- If you already have a regular scheduled pickup, it is not necessary to schedule a one-time pickup or add another regular scheduled pickup.

- Pickup at a residential address is available for an additional surcharge.
- You cannot change a pickup request. To change a request, you must delete the original request and enter a new request.

General information:

- To request a pickup for a different country, include the Country element with the appropriate country code where you would like FedEx to pick up your shipment.
- If you need to schedule a pickup for both FedEx Express (including intra-Mexico shipping) and FedEx Ground packages, you are required to schedule one pickup for each of the carriers individually.
- If your total package weight exceeds 150 lbs., contact FedEx Customer Service for assistance.
- If your pickup location is in a remote area, make sure your packages are ready earlier to accommodate remote pickup schedule.
- Always include the latest time your package can be picked up (or your company's close time).
- Saturday pickup service is offered in select locations worldwide for your FedEx Express packages. Saturday drop-off is also available at many FedEx locations. Use the FedEx Web Services Locations Service WSDL to receive a list of Saturday drop-off locations.
- For FedEx Ground and FedEx Express pickups, you may request an alternate pickup address other than the shipping location attached to your FedEx account number. An additional surcharge applies.
- If you want a regular FedEx Express or FedEx Ground pickup service, contact your FedEx account executive.
- Pick up can be scheduled for FedEx SameDay® within Mexico and FedEx SameDay® City within Mexico City and the southern Mexican States. For additional details please refer to the Web Services Developer Guide.
- New options have been added to support domestic UK pickup as mentioned below:
 - FEDEX_DISTANCE_DEFERRED
 - FEDEX_NEXT_DAY_EARLY_MORNING
 - FEDEX_NEXT_DAY_MID_MORNING
 - FEDEX_NEXT_DAY_AFTERNOON
 - FEDEX_NEXT_DAY_END_OF_DAY
 - FEDEX_NEXT_DAY_FREIGHT

For more detailed information about the services offered by FedEx, see the electronic [FedEx Service Guide](#).

2.1.1.1 LTL Freight Pickup Special Services

CreatePickupRequest has several special service types that can be setup in FreightPickupDetail/LinItems. Some of these Special Services are only for LTL, some for small parcels and some are for both. The ones marked 'For Freight Shipments' in the shipment special service type valid values in the table below relate to LTL freight pickup.

Element	Description
FreightPickupDetail/LinItems/ShipmentSpecialServicesRequested/ShipmentSpecialServiceType	<ul style="list-style-type: none"> • BLIND_SHIPMENT - Freight shipment to be handled as blind shipment. • BROKER_SELECT_OPTION • CALL_BEFORE_DELIVERY - For Freight shipments. • COD • CUSTOM_DELIVERY_WINDOW - Freight shipment has non-standard delivery date/range. • CUT_FLOWERS • DANGEROUS_GOODS - Freight shipment contains hazardous materials. • DELIVERY_ON_INVOICE_ACCEPTANCE • DETENTION - Freight shipment delayed prior to loading or unloading. • DO_NOT_BREAK_DOWN_PALLETS - For Freight shipments. • DO_NOT_STACK_PALLETS - For Freight shipments. • DRY_ICE • EAST_COAST_SPECIAL • ELECTRONIC_TRADE_DOCUMENTS - Electronic Trade Documents for international parcel shipments. • EMAIL_NOTIFICATION • EXCLUSIVE_USE - Freight shipment requires exclusive use of equipment. • EXHIBITION_DELIVERY - Freight shipment delivery address is for amusement park, trade show, fair, etc. • EXHIBITION_PICKUP - Freight shipment pickup address is for amusement park, trade show, fair, etc. • EXPEDITED_ALTERNATE_DELIVERY_ROUTE - For Custom Critical use only. • EXPEDITED_ONE_DAY_EARLIER - For Custom Critical use only. • EXPEDITED_SERVICE_MONITORING_AND_DELIVERY - For Custom Critical use only. • EXPEDITED_STANDARD_DAY_EARLY_DELIVERY - For Custom Critical use only. • EXTRA_LABOR - Express Freight shipment requires additional labor at load or unload. • EXTREME_LENGTH - Freight shipment contains shipping unit or

Element	Description
	<p>piece with excessive length.</p> <ul style="list-style-type: none"> • FEDEX_ONE_RATE • FLATBED_TRAILER - Freight shipment requires flatbed trailer. • FOOD - For Freight shipments. • FREIGHT_GUARANTEE - Freight shipment has date or date and time delivery guarantee. • FREIGHT_TO_COLLECT - For Pitstop India • FUTURE_DAY_SHIPMENT • HOLD_AT_LOCATION • HOLIDAY_DELIVERY - For Pitstop India • HOLIDAY_GUARANTEE - Freight shipment to be delivered on holiday. • HOME_DELIVERY_PREMIUM • INSIDE_DELIVERY • INSIDE_PICKUP • INTERNATIONAL_CONTROLLED_EXPORT_SERVICE • INTERNATIONAL_MAIL_SERVICE • INTERNATIONAL_TRAFFIC_IN_ARMS_REGULATIONS • LIFTGATE_DELIVERY - Freight shipment requires liftgate at delivery address. • LIFTGATE_PICKUP - Freight shipment requires liftgate at pickup address. • LIMITED_ACCESS_DELIVERY - Freight shipment to be delivered at address with limited access. • LIMITED_ACCESS_PICKUP - Freight shipment to be picked up at address with limited access. • MARKING_OR_TAGGING - Freight shipment to include marking or tagging of pieces. • NON_BUSINESS_TIME - Freight shipment to include services performed during non-business hours and/or days. • PALLET_SHRINKWRAP - Freight shipment to include shrinkwrapping of pallets by FedEx Freight. • PALLET_WEIGHT_ALLOWANCE - Freight shipment to be rated with standard allowance for pallets. • PALLETS_PROVIDED - Freight shipment to include pallets provided by FedEx Freight. • PENDING_COMPLETE • PENDING_SHIPMENT • PERMIT - Freight shipment to include permit obtained by FedEx. • PHARMACY_DELIVERY • POISON - For Freight shipments. • PORT_DELIVERY - Freight shipment to include delivery to a port.

Element	Description
	<ul style="list-style-type: none"> • PORT_PICKUP - Freight shipment to include pickup at a port. • PRE_DELIVERY_NOTIFICATION - Freight shipment requires notification to consignee prior to delivery. • PROTECTION_FROM_FREEZING - Freight shipment requires protection from freezing temperatures. • REGIONAL_MALL_DELIVERY - Freight shipment to be delivered at major regional shopping mall. • REGIONAL_MALL_PICKUP - Freight shipment to be picked up at major regional shopping mall. • RETURN_SHIPMENT • RETURNS_CLEARANCE - Special clearance requested for international returns shipment. • RETURNS_CLEARANCE_SPECIAL_ROUTING_REQUIRED • SATURDAY_DELIVERY • SATURDAY_PICKUP • SHIPMENT_ASSEMBLY - Freight shipment to include assembly services. • SORT_AND_SEGREGATE - Freight shipment to include sorting and/or segregating services. • SPECIAL_DELIVERY - For Pitstop India • SPECIAL_EQUIPMENT - Freight shipment to include use of special equipment. • STORAGE - Freight shipment to include storage by carrier. • SUNDAY_DELIVERY - For Pitstop India • THIRD_PARTY_CONSIGNEE • TOP_LOAD - For Freight shipments. • USPS_DELIVERY - Freight shipment to include delivery by US Postal Service. • USPS_PICKUP - Freight shipment to include pickup by US Postal Service. • WEIGHING - Freight shipment to include weighing.

Note:

Below are examples of when and why a SpecialServicesType need to be specified in a LTL freight request:

- *FOOD value is selected when shipment has food items. This is required for Freight so that this shipment is not moved with other shipments that may potentially contain poison. The same is applied for POISON service so that it cannot be moved with FOOD shipments.*
- *TOP_LOAD value is selected when shipment is delicate and that needs to be kept at the top – so that other shipments are not stacked on this to avoid damage.*
- *DO_NOT_BREAK_DOWN_PALLETS value is selected if restacking of pallets may be required for a load shifted to put the truck back in balance or if an inspection may be needed due to freight being misrepresented and not classified correctly.*

2.1.1.2 Pickup Service Request Elements

In addition to the elements required for all requests, the following elements are included in the Pickup Service request:

Table 1: Pickup Service Request Elements

Element	Description
AssociatedAccountNumber	Account number from a FedEx operating entity
TrackingNumber	Specifies the tracking number to be used for processing a pickup for a return shipment.
OriginDetail/UseAccountAddress	This element is required if you want to have the package picked up at a different address than the one associated with the shipper account. Valid values are: <ul style="list-style-type: none"> Y — Use shipper Address N — User Alternate Address If you enter N, the PickupLocation element is required.
OriginDetail/PickupLocation	This element is required for alternate pickup addresses. Valid elements are: <ul style="list-style-type: none"> Contact Address
OriginDetail/PackageLocation	Provides a location description where the courier/driver will pick up the package. PickupServiceBuildingLocationType: Valid values are: <ul style="list-style-type: none"> FRONT NONE SIDE REAR
OriginDetail/BuildingPartCode	Describes the package location building type for the pickup: <ul style="list-style-type: none"> APARTMENT BUILDING DEPARTMENT FLOOR ROOM SUITE
OriginDetail/BuildingPartDescription	Accompanies the BuildingPartCode to describe the package pickup location. Entries can be an apartment number, suite number, etc.
OriginDetail/ReadyTimeStamp	Identifies the date and time the package will be ready for pickup by FedEx. The time must be no later than the CutOffTime, which can be discovered with the PickupAvailabilityRequest. FedEx Express pickup can be scheduled for the current or next business day.
OriginDetail/CompanyCloseTime	Your company close time is required for a successful dispatch request. The time between the ReadyTimestamp and the

Element	Description
	CustomerCloseTime must be no less than a length of time called the AccessTime, which can be discovered with a PickupAvailabilityRequest.
PickupServiceRequest/PackageCount	Total number of packages that make up the dispatch request.
PickupServiceRequest/TotalWeight	Total weight of packages that make up the dispatch request.
PickupServiceRequest/CarrierCode	FedEx operating company (FedEx Express, FedEx Ground) performing the pickup.
PickupServiceRequest/OversizePackageCount	Identifies the number of oversize packages that are tendered to FedEx Ground. For more information about oversize package requirements, see the electronic FedEx Service Guide .
PickupServiceRequest/CourierRemarks	Any additional information that the courier needs to perform your pickup should be included in the reply request.
PickupServiceRequest/CommodityDescription	Required for international APAC customers only. Provides area for any additional commodity description. Field is limited to 20 characters since P2D and Cosmos restrict the commodity description to 20 characters.
CreatePickupRequest/PickupServiceCategory	Specifies the service category for the pickup being scheduled. Valid values are: SAME_DAY SAME_DAY_CITY FEDEX_DISTANCE_DEFERRED FEDEX_NEXT_DAY_EARLY_MORNING FEDEX_NEXT_DAY_MID_MORNING FEDEX_NEXT_DAY_AFTERNOON FEDEX_NEXT_DAY_END_OF_DAY FEDEX_NEXT_DAY_FREIGHT

Note: Dispatch requests should be limited to one request per day unless you add packages that exceed the dimensions or weight for the original request.

If you want to schedule a FedEx Express Freight dispatch, the following additional elements are required

Element	Description
ExpressFreightDetail/Service	Valid FedEx Freight service type.
ExpressFreightDetail/BookingNumber	All freight shipments required an advanced booking number from FedEx. This booking number is also required for freight dispatch requests.
ExpressFreightDetail/Dimensions	Length, width, and height of freight shipment to be picked up.
ExpressFreightDetail/TruckType	Type of truck required for pickup. Valid values are: <ul style="list-style-type: none"> Drop_Trailer_Agreement Liftgate

Element	Description
	<ul style="list-style-type: none"> Tractor_Trailer_Access
ExpressFreightDetail/TrailerSize	Trailer size required for dispatch. Valid values are: <ul style="list-style-type: none"> TRAILER_28_FT TRAILER_48_FT TRAILER_53_FT

2.1.1.3 Pickup Service Reply Elements

The following elements are returned in the Pickup Service reply:

Table 2: Pickup Service Reply Elements

Element	Description
DispatchConfirmationNumber	FedEx returns a dispatch confirmation number for a successful dispatch request. This number must be used if you need to cancel the dispatch.
Location	The FedEx station ID receiving an FedEx Express dispatch request.
Message	This message provides information regarding the success or failure of the dispatch request. <i>Note: Dispatch requests may fail if you enter an insufficient time window between Package Ready and Business Close. If you have questions about pickup times, contact your regional FedEx Support Hotline.</i>
PRP Control Number	PRP, Package Returns Program, Control Number - If you have contracted with FedEx to use the Package Return Program (PRP), the PRP control number is required in your dispatch request. For more information about PRP, go to fedex.com/us/services/options/returns/prp.html .

2.1.1.4 Pickup Service Country Codes

Table 3: Pickup Service Country Codes

Code	Country	Code	Country
AE	United Arab Emirates	IE	Ireland
AN	Netherlands Antilles	IL	Israel
AR	Argentina	IN	India
AT	Austria	IT	Italy

HU	Hungary	VI	U.S. Virgin Islands
ID	Indonesia		

2.2 Cancel Pickup Service

Use the Cancel Pickup Service to cancel a pickup request.

2.2.1 Cancel Pickup Service Details

You may cancel a FedEx Express or FedEx Ground pickup if the request package ready time has not already been met. See [Cancel Pickup Request/Reply Coding Details for FedEx Freight](#).

For more detailed information about the services offered by FedEx, see the electronic [FedEx Service Guide](#).

2.2.2 Cancel Pickup Service Coding Details

In addition to the basic service elements required for most transactions (AuthenticationDetail and ClientDetail), the following elements are required to cancel a Pickup Service request:

Table 4: Cancel Pickup Service Request Elements

Element	Description
DispatchConfirmationNumber	This number is received from FedEx in your dispatch reply and is required for canceling a dispatch request.
ScheduledDate	Indicates the date the dispatch occurs.
Location	The location information for the FedEx station handling the dispatch is returned in the dispatch reply. This information is required to cancel an FedEx Express dispatch.
CourierRemarks	Any additional information for the FedEx courier regarding the dispatch cancellation.

If you enter an invalid dispatch confirmation number or this number does not match the location and/or scheduled date of the dispatch, you will receive an error notification. If the FedEx courier has already been dispatched to your pickup location, the dispatch cannot be canceled and the CancelPickup Service reply will return a failure notification.

2.2.3 Cancel Pickup Request/Reply Coding Details for FedEx Freight

In addition to the basic service elements required for most transactions (AuthenticationDetail and ClientDetail), the following elements are required to cancel a Pickup request for a FedEx Freight shipment:

Table 5: Cancel a Pickup Request Elements

Element	Description
CarrierCode	<p>Identifies the FedEx service operating company (transportation) that was sent the pickup that is being canceled.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • FDXC • FDXE • FDXG • FXCC • FXFR

Element	Description
	<ul style="list-style-type: none"> FXSP
PickupConfirmationNumber	Identifies the pickup confirmation number that is being canceled. The pickup confirmation number was returned to the client when the pickup was requested.
ScheduledDate	Identifies the scheduled date for the pickup that is being canceled. The scheduled date was provided by the client when the pickup was requested.
EndDate	Identifies the end date for the pickup that is being canceled.
Location	Identifies the FedEx location identifier responsible for processing the package pickup that is being canceled. The FedEx location identifier was returned to the client when the pickup was requested. Required for Express service type.
Remarks	Identifies comments the customer wants to convey to the FedEx courier regarding the package pickup.
ShippingChargesPayment	Includes the descriptive data for the monetary compensation given to FedEx for services rendered to the customer.
Reason	Identifies the reason for canceling the pickup request.
ContactName	Identifies the name of the person that requested pickup cancellation.
PhoneNumber	Identifies the phone number of the person that requested pickup cancellation.
PhoneExtension	Identifies the phone extension of the person that requested pickup cancellation.

The CancelPickupReply element returns the descriptive data to a client in response to a CancelPickupRequest. The following elements are returned in a Cancel Pickup reply for a FedEx Freight shipment:

Table 6: Cancel a Pickup Reply Elements

Element	Description
HighestSeverity	<p>Identifies the highest severity encountered when performing the request. Valid values in order from high to low are:</p> <ul style="list-style-type: none"> FAILURE ERROR WARNING NOTE SUCCESS
Notifications	<p>Includes the descriptive data detailing the status of a submitted transaction. Includes the severity of the notification, which indicates success or failure or some other information about the request. Valid values are:</p> <ul style="list-style-type: none"> SUCCESS — Your transaction succeeded with no other applicable

Element	Description
	<p>information.</p> <ul style="list-style-type: none"> NOTE — Additional information that may be of interest to you about your transaction. WARNING — Additional information that you need to know about your transaction that you may need to take action on. ERROR — Information about an error that occurred while processing your transaction. FAILURE — FedEx was unable to process your transaction at this time due to a system failure. Please try again later.
TransactionDetail	Includes descriptive data that governs data payload language/translations. The TransactionDetail from the request is echoed back to the caller in the corresponding reply.
Version	Identifies the version/level of a service operation expected by a caller (in each request) and performed by the callee (in each reply).
Message	Includes a Human readable message from the dispatch system.

2.3 Pickup Availability

Use Pickup Availability to obtain cutoff and access time required to request and schedule a pickup and pickup based on the specified area. You may check pickup availability for either FedEx Express or FedEx Ground shipments. See [Pickup Availability Request/Reply Coding Details for FedEx Freight](#).

2.3.1 Pickup Availability Coding Details

In addition to the basic service elements required for most transactions (AuthenticationDetail and ClientDetail), the following elements are available for a PickupAvailability request:

Table 7: PickupAvailability Elements

Element	Description
PackageReadyTime	<p>Optional. Identifies the date and time the package will be ready for pickup by FedEx. Express pickup can be scheduled for the current or next business day. Format HHMM where valid time format HH is a value between 00 and 24 and MM is not a value between 00 and 59.</p> <p><i>Note: The Package Ready Time does equate to the time the driver should arrive for the package</i></p>
CompanyCloseTime	<p>Optional. Specify your company close time. The ReadyTimeStamp and the CompanyCloseTime must allow a long enough time period for a FedEx courier to arrive at your pickup location. Format HHMM where valid time format HH is a value between 00 and 24 and MM is not a value between</p>

Element	Description
	00 and 59.
DispatchDate	Optional. Specify the date for package pickup.
StreetLines	Optional. Specify if a street address line(s) is required.
City	Optional. Specify the pickup city.
StateOrProvinceCode	Required only if recipient country is U.S. or Canada, or if SED applies and country is Mexico (MX).
PostalCode	Required for FedEx Ground shipments if recipient country is a postal aware country.
UrbanizationCode	Optional. Relevant only to addresses in Puerto Rico, where multiple addresses within the same postal code can have the same house number and street name. When this is the case, the urbanization code is needed to distinguish them.
CountryCode	Required.
CountryName	Required. The fully spelled out name of a country.
PickupRequestType	Required. Request type valid values are: <ul style="list-style-type: none"> SAME_DAY FUTURE_DAY
Carriers	Required. FedEx service (FedEx Express, FedEx Ground) performing the pickup. Valid values are: <ul style="list-style-type: none"> FDXG FDXE
PickupShipmentAttributes/dimensions	Optional. Descriptive information about the package dimensions.
PickupShipmentAttributes/weight	Optional. Descriptive information about the package weight.

2.3.2 Pickup Availability Request/Reply Coding Details for FedEx Freight

2.3.2.1 Pickup Availability Request Elements

In addition to the basic service elements required for most transactions (AuthenticationDetail, ClientDetail, TransactionDetail, and AccountNumber), the following elements are required to request availability of pickup for a FedEx Freight shipment:

Table 8: Pickup Availability Request Elements

Element	Description
PickupAddress	Includes descriptive data for a physical location. May be used as an actual physical address (place to which one could go), or as a container of *address

Element	Description
	parts" which should be handled as a unit, such as a city-state-ZIP combination within the U.S.
PickupRequestType	Describes the relationship between the date on which a dispatch occurs and the date on which it is created (scheduled) by means of a CourierDispatchRequest. <ul style="list-style-type: none"> FUTURE_DAY means that the dispatch date is later than the date on which it is created. If FUTURE_DAY is included, then Options with ScheduleDay of FUTURE_DAY will be included in the reply SAME_DAY means that the dispatch is to occur on the date on which it is created. If SAME_DAY is included, then Options with ScheduleDay of SAME_DAY will be included in the reply.
DispatchDate	Identifies the dispatch date (in the local time zone) for the pickup whose availability is being requested.
NumberOfBusinessDays	Identifies the number of business days to consider when checking availability.
PackageReadyTime	Identifies the time when the package will be ready to be picked up. The time is local to the pickup postal code, in 24-hour form, such as 13:00:00. It should not contain a TZD. If a TZD is included, it will be ignored.
CustomerCloseTime	Identifies the latest time at which the courier will be able to gain access to pick up the package(s). The time is local to the pickup postal code, in 24-hour form, such as 17:00:00. It should not contain a TZD. If a TZD is included, it will be ignored.
Carriers	Identifies the FedEx carrier(s) for which availability is requested. Valid values are: <ul style="list-style-type: none"> FDXC FDXE FDXG FXCC FXFR FXSP
ShipmentAttributes	Includes descriptive information about the shipment.

2.3.2.2 Pickup Availability Reply Elements

The PickupAvailabilityReply element returns the descriptive data to a client in response to a PickupAvailabilityRequest. The following elements are returned in a Pickup Availability reply for a FedEx Freight shipment:

Table 9: Pickup Availability Reply Elements

Element	Description
HighestSeverity	Identifies the highest severity encountered when performing the request. Valid values in order from high to low are: <ul style="list-style-type: none"> • FAILURE • ERROR • WARNING • NOTE • SUCCESS
Notifications	Includes the descriptive data detailing the status of a submitted transaction. Includes the severity of the notification, which indicates success or failure or some other information about the request. Valid values are: <ul style="list-style-type: none"> • SUCCESS — Your transaction succeeded with no other applicable information. • NOTE — Additional information that may be of interest to you about your transaction. • WARNING — Additional information that you need to know about your transaction that you may need to take action on. • ERROR — Information about an error that occurred while processing your transaction. • FAILURE — FedEx was unable to process your transaction at this time due to a system failure. Please try again later.
TransactionDetail	Includes descriptive data that governs data payload language/translations. The TransactionDetail from the request is echoed back to the caller in the

Element	Description
	corresponding reply.
Version	Identifies the version/level of a service operation expected by a caller (in each request) and performed by the callee (in each reply).
RequestTimeStamp	Identifies the point in time when the request was processed.
Options	Identifies the options for picking up the shipment.
Options/Carrier	The carrier to which the PickupScheduleOption applies
Options/Description	Descriptive information about the shipment
Options/ScheduleDay PickupRequestType	Tells whether this option describes a dispatch created on the dispatch date (SAME_DAY), or on a prior date (FUTURE_DAY).
Options/Available	True if this pickup option is available.
Options/PickupDate	Identifies the date (in the postal code's time zone) to which this PickupScheduleOption refers.
Options/CutOffTime	Identifies the latest allowed ready time (in the postal code's time zone) for a postal code. As a local time, it will not include a Time Zone Designator.
Options/AccessTime	Identifies the minimum required length of the window of time between the ReadyTime and CustomerCloseTime.
Options/ResidentialAvailable	
Options/CountryRelationship	
CloseTimeType	Identifies whether the close time is specified by the customer or is the default time. Valid values are: <ul style="list-style-type: none"> CUSTOMER_SPECIFIED DEFAULT
CloseTime	Identifies the close time corresponding to the specified CloseTimeType.
LocalTime	Identifies the local time of the service center that will service the pickup.

2.3.3 Pickup Availability Reply Elements

The following elements are returned in the Pickup Availability reply:

Table 10: Pickup Availability Reply Elements

Element	Description
RequestTimeStamp	Identifies the date and time when the carrier will arrive for pickup.
PickupScheduleOption	Identifies the options for picking up the shipment.

Element	Description
PickupScheduleOption/carrierCode/	Carrier code type. Valid values supported include: <ul style="list-style-type: none"> FDXG FDXE
PickupScheduleOption/description	Pickup type. Valid value is NON_FREIGHT.
PickupScheduleOption/ScheduleDay	Pickup date.
PickupScheduleOption/available	Pickup availability. Valid values supported include: <ul style="list-style-type: none"> SAME FUTURE
PickupScheduleOption/cutoffTime	Latest pickup time.
PickupScheduleOption/accessTime	Time window for pickup. This is the minimum time window that must be allocated for the FedEx courier to make the pickup. The difference between the Business Close Time (or the local "cutoff time" if it is earlier than the Business Close Time) and the Package Ready Time must be equal to, or exceed, the access time. <i>Note: Access time requirements vary by postal code.</i>
PickupScheduleOption/ ResidentialAvailable	Identifies availability of residential pickup.

2.4 Error Messages

For error messages, see the Error Code Messages section of the *Web Services Developer Guide*.
